- Annual Flower Seeds -

Of the most important items listed we have indicated the number of seeds per ounce to better enable you to figure the amount of seed you'll need for your planting requirements. Keep in mind that you cannot expect every seed to germinate i. e. most large seeds germinate from 60 to 80 percent under normal germinating conditions, sometimes a higher percentage is obtained, which means that a little more seed is required to obtain the number of plants desired.

F₁ HYBRID
SNAPDRAGONS
FOR OUTDOOR

The advantage of F₁ Hybrid Snapdragons for outdoor is marked by strong growth of the plants as compared with straight varieties; the difference in vigor is quite conspicuous between them. They are not only uniform in color and growth, but found to be much earlier flowering on top of the extreme vigorous and floriferous habit, thus they stay in flower for a longer period than any straight varieties.

Originator's "Sakata in Japan" varieties—which he describes as follows.

Medium Pink. Comparable to "Loveliness", but clearer color. Best outdoor pink.

Deep Rose. Almost same color as "Rosalie", but brighter and with heavier spikes.

Dark Red. Comparable to "Crimson" but brighter with good heavy spikes.

Bright Red. Trifle brighter in color than "Temptation".

Orchid. Cattleya orchid or lavender color comparable to "Bold Venture".

F₁ Hybrid Outdoor Antirrhinum

White. Almost pure white, much whiter than "Bob White" and looks superior to it in size of flower and spike.

Yellow. Same as "Canary Bird" a bright yellow, but with better spikes.

F₁ Hybrid Formula Mixture. Blend of above 7 colors.

"SAKATA'S" ALL-DOUBLE FLOWERING SNAPDRAGONS

"Sakata" in Japan, the originator of All-Double Petunias, informs us that since they introduced this new All-Double Flowering Snapdragons in color it has caused a great deal of interest where they were grown. These "All-Double Snaps" are suitable for both INDOOR and OUTDOOR culture. On account of heavy substance of their double flowers they require a little more space and nourishment than singles for successful cultivation.

All-Double Bronze. 100% double flowering, beautiful salmon pink with tint of bronze. Looks beautiful under artificial light.

All-Double Crimson. 100% double flowering crimson red.

All-Double Pure White. 100% double flowering pure white.

All-Double Rose Pink. 100% double flowering rose-pink. One of the most fascinating colors.

Expose the little soil you need for a few pans or bulb-dishes underneath the grate or a clean bed of hot coals in your boiler for 15 minutes or so to kill all weeds. Thoroughly soak the filled pans, dust the spores on the surface and cover the pans with glass to keep from direct sunlight. Carmen. Slightly darker shade of "Sioux", salmon rose, otherwise, very much similar in habit of growth and flowering. Uniform, dwarf plants.

TRYSOMIC. 42,000 S. Seed of Trysomic Stock will produce in excess of 86% doubles if properly handled, according to the following instructions:

Trysomic Stock singles are smaller and weaker than the doubles in the seedling stage. Therefore, the practice of sorting or segregating Trysomic Stock seedlings by size results in a division of plants into doubles and singles with but few borderline exceptions.

Through such sorting 86% of a grower's flats will be of a slightly higher double count than the normal 86% from Trysomic Stock seed. Sorting of Trysomic seedlings into flats is not recommended, take all plants as they come, they will produce about 86% doubles.

Trysomic 7 Weeks Mixed. For growing in warmer climates. Plant first throws a central spike of bloom some 6 inches or more in height, then goes to produce numerous side branches throughout its growing period, eventually forming an attractive branching plant from 12 to 15 inches in height. ½ Tr. ZINNIAS

For bedding (flat sales) sow seed about 4 to 5 weeks ahead of time. For summer cuts wait till the ground is warm, they flower after 6 to 8 weeks.

Merry-Go-Round — the amazing new Zinnia for 1959. 3000 S. The large flowers, 3 to 4 inches in diameter are borne freely on dwarf, bushy 1 to 1½ ft. tall plants. Perfectly ideal for bedding purposes. Flowers are of the **Cactus** and **Semi-Cactus** type of color and beauty never before seen in Zinnias — dazzling scarlet-red, edged snow white, clear deep purple, tipped pure white, or bases of the petals (florets) a brilliant fiery red, the outer 1/3 to 1/2 sparkling gold — many bright shades of pink, salmon, rose, edged pure white. A **real bicolor** Zinnia. The colors are not suffused, but sharp and abrupt contrasts. In many of the flowers there is even a third color at the very bases of the petals — a mystical shade of lavender. Many flowers are of such a distinctly heavy substance, as to feel as though made of glass. Hence, keep better as cut-flowers than the larger, soft petalled varieties.

Miss Universe. 3000 S. Very large, deep, full flowers in a wide color range — clear, bright colors and undreamed of sharp bicolors and surprise color blends. Strong and healthy plants with bushy growth, $\frac{1}{3}$ to $\frac{1}{2}$ less than the height of ordinary large flowered varieties. Under most conditions the plants develop no more than $1\frac{1}{2}$ to 2 ft. in height. Branching is from the base of the plant, assuring ideal long-stemmed cut-flowers.

New Century Mixed. 3000 S. A Ferry-Morse development. The first polyploid Zinnia. Sturdy, erect growth. Huge double flowers in luminous shades of pink, rose, salmon, yellow, orange and gold. GIANT HYBRIDS or GIANT CACTUS FLOWERED. 3000 S.

Ice Cream. The first truly pure cream Zinnia. Not a shade of yellow or white, but full-bodied cream. Giant formal cactus blooms up to 5 inches and more in diameter, deep and fully formed. "Cream" the color so rarely observed in but one or two of the recent Zinnia mixtures, is much prized, because it is the only color that combines with and has a tendency to harmonize with all other flower colors.

Plus-X-Cactus. Genuine F₂ Colossal Hybrid Mixture. Derived by crossing the separate colors of the different Cactus varieties. With Plus-X-Cactus comes hybrid vigor, hybrid size and hybrid profusion. Extra large, double cactus-like flowers, 6 to 7 inches and more in diameter, borne on extra vigorous thrifty plants. A complete color range, beautifully balanced.

Zinnia "Giant Dahlia Flowered"

ZINNIAS

One of the most popular and easily grown annuals, *Zinnias* grow in most any soil, but do best in a sunny location and thrive on heat.

Most of our seed is grown by "Bodger's in California" introducers of the *Dahlia Flowered* and *California Giant* or *Mammoth* types, therefore, insuring you of the best in *Zinnias* your money can buy.

From "Burpee's" another pioneer in the *Zinnia* field come the newer varieties - *Burpee Hybrids* - *Super Giants* - *Floradale Beauty* - etc.

Zinnias require a warm temperature, 65° minimum-better, 70° — to germinate satisfactorily.

ZINNIAS — (Continued)

Pink Lady. The first new color in **California Giant Zinnias** in many years. This pleasing variety combines delightful shades of shrimp pink in the center of the flower with cream or buff in the outer petals. Actually, each petal is pink as it opens, and in cool or cloudy weather remains pink as the flower expands. But exposed to the sun the petals gradually change to the cream or buff tones while the center of the flower continually produces more pink petals.
